

Environmental Authorization Form (Under Antarctic Treaty System and

Environmental Protocol)

For executing those activities which requires Enironmental Evaluation

Version: 3.0 August 3, 2021

Protection of Antarctica

India's accession to Instrument of Antarctica Treaty executed in 1983, thereafter, signing Madrid Protocol also known as Environmental Protocol (Protocol on Environmental Protection to Antarctica Treaty) in the year 1998 (adopted in 1991, enforced in 1998), affirms comprehensive protection of Antarctic Environment and its dependent and associated ecosystems.

Environmental Authorization and Permits required under *Protocol on Environmental Protection to the Antarctica Treaty (Madrid Protocol)* for commencing activities south of 60 degrees south and marine area under the *Convention for the Conservation of Antarctic Marine Living Resources (CCAMLR)*.

The form is required for: Proponent/s willing to execute any activity which requires environmental evaluation within Antarctica Treaty Area including CCAMLR area.

Applicable to:

- o Indian Antarctic Expedition Member/s as well as other organization/s or any citizen of India, undertaking activities in the Antarctic Treaty Area through Indian Antarctic Expedition or part of it, including scientists and logistical personnel..
- o Citizens and organizations of State Party other than India, if their activity is part of the Indian Antarctic Expedition.

For Official Use Only

Reviewer: (Environmental Officer)	Review Date:	Authorizing Officer: (Director, NCPOR)	Authorization Date:

		Name, Date and Signature	

(If space provided in the application to submit required informati on is not sufficient, may you please attach a separate sheet)

Environmental Authorization Form (Under Antarctic Treaty System

and Environmental Protocol)

For Executing Those Activities Which Requires Environmental Evaluation

PART A: Applicant Details
A1.Name of Applicant (proponent or Principal Investigator):
A2. Indian Antarctic Expedition Details/Other Expedition (as applicable):
A3.Project Title:
A4. Purpose: Scientific Logistics
A5. Duration: Summer Winter
A6. Project Number (if applicable):
A7.1 Organization Name:
A7.2 Postal address of Principal Investigator:
Email address:
Telephone/Mobile number
Website:
Nationality:
A8. If the authorization is to be issued to a company, partnership or Association, provide the following information: Name of Company, Association or Partnership: Business Address:
Postal Address:
Website:

PART B: ENVIRONMENTAL IMPACT ASSESSMENT B1. INTRODUCTION

India has obligations under the Antarctic Treaty System to protect the Antarctic Environment. Parts of the Antarctic environment are highly susceptible to the effects of human activities and less able to recover from disturbance or damage.

B2. Environmental Impact Assessment and Authorisation

Environmental impact assessment (EIA) is the process used to evaluate the likely environmental effects of a proposed activity, project or program. An EIA is required for any activity proposed to be undertaken in any area south of 60°S, including all water, land and ice shelves and CCAMLR area. The EIA must be authorised before the activity commences. It is not possible to retrospectively authorise an activity.

The EIA process requires proponents to identify and minimise the environmental impacts of their activities and consider alternatives. The EIA process is three-tiered.

- A Preliminary Assessment (PA) is required for all new activities. It will determine if the likely impacts of the activity will be **no more than negligible.** The NCPOR authorises such activities.
- An Initial Environmental Evaluation (IEE) is required if it has determined that the likely impacts
 of an activity on the environment are minor or transitory. An IEE requires a more elaborate
 consideration of the elements of activity and the likely environmental impacts; it must consider
 alternatives to the proposed activity, and include a public consultation phase. IEEs are made
 available to other Antarctic Treaty Parties on request.
- A Comprehensive Environmental Evaluation (CEE) is required if a PA or an IEE determines that an activity will have impacts **on the environment** that are **more than minor or transitory.** The CEE involves a thorough examination of the activity, its environmental outputs, the receiving environment, and any alternatives. It is the highest level of EIA. Draft CEEs are subject to a wide public consultation process and are circulated to other Antarctic Treaty Parties and tabled at an annual meeting of the Committee for Environment Protection. This process may take up to two years to complete.

The EIA should provide enough information to allow a determination to be made as to the level of impact that the activity may have on the environment. It may include, for example, information on:

- the likely impacts of the activities on flora and fauna of the region; ice, water, air and surface quality; heritage/wilderness and/or aesthetic values of the area; emissions; waste generation handling and impacts;
- potential cumulative impacts; and
- other possible impacts.

If you are aware that the activities you are proposing will have more than a minor or transitory impact on the Antarctic environment, an Environmental Impact Assessment (EIA), such as an Initial Environmental Evaluation (IEE) or a Comprehensive Environmental Evaluation (CEE), may already have been prepared by your organisation, if so, you should summarise the main findings here and attaché a copy of document.

B3.	Where	IEE/CEE	prepared	for the	proposec	i activity
-----	-------	---------	----------	---------	----------	------------

- If yes, then attach the document along with application
- If no, then justify the reason why IEE or CEE is not required to prepare for the proposed activity in a separate sheet and attach with application

(EP: Enenvironmental Protocol)

B3. ACTIVITY DETAILS. Please provide a detailed description of the activity (and/or refer to sections of your attached EIA report if applicable). What is the objective or purpose of the activity/activities?_ What are the locations of the proposed activity/activities? (Please provide the name and geographic coordinates of locations, and a map including planned vehicle/aircraft/ship routes, and any protected areas.) Activity to be carried out during: Summer Winter What are the planned dates you will undertake activities in Antarctica How many site or field visits do you anticipate will be involved? What is the frequency and duration of activities or field work, and what methods of transport will be used? What equipment and methods will be used? If you will be travelling in helicopters or vehicles, will you need to travel or land closer than wildlife separation guidelines at any time: If yes provide further details_____ **B4.** ALTERNATIVES TO THE ACTIVITY What are possible alternatives to the activity, including the alternative of not carrying on the activity? What are the consequences of each alternative?

raste (including human waste), noise, light etc - consider nature,	(such as physical disturbance, emissions, e, extent, duration and intensity)?
5. WHICH ENVIRONMENTS MAY BE IMPACTED?	
Vill there be impacts on ice, water or air quality: yes provide further details	Yes No
Vill there be impacts on ice free areas, lakes or lake catchments	: Yes No
yes provide further details	
Vill there be impacts on wildlife or wildlife areas, moss or licher yes provide further details	
re there any impacts on heritage, wilderness and/or aesthetic varyes provide further details	
re there any other environmental sensitivities, or impacts quipment near others' equipment): yes provide further details	Yes No
There native mammals, birds or invertebrates are involved in a fill be treated in an appropriately humane manner? If the projectesse include details of (i) the reviewing body, (ii) the date to inclusions and any project-specific recommendations.	ect has been subject to an ethical review,
the mammals, birds or invertebrates (alive or deceased) are to	be transported, how will this be done?

chemical substance please list (i) the l	us substances be taken into Antarctica? Please list any hazardous substances (e.g.es), radioactive material or stable isotopes that you propose to use. For each substance azard class, (ii) the quantity, (iii) why it is required and (iv) whether or not they will be nvironment. Please explain how they are intended to be used.
	install and againment in Automatics (a.g. data la compatible manifesta and manifesta)?
yes, please provid	install any equipment in Antarctica (e.g. data loggers, stke, receivers or markers)? Ite (i) a brief description of the equipment, (ii) a summary of the installation location the equipment will be maintained and (iv) when it will be removed.
